

## **SPECIFICATION AMENDMENTS**

Please amend the paragraph/section beginning on page 6, line 25, as follows:

Referring to **FIGS. 1-5**, a pressure-vent hurricane shutter has at least one shutter framework **1** that includes structural beams that preferably are structural metal tubes having face walls **2** that are about one to two inches wide and edge walls **3** that are one-and-one half inches wide. A shutter spacer **4** is located proximate to the shutter framework and is oriented horizontally. The face walls **2** and the edge walls **3** are about one-eighth inch thick and made preferably of structural aluminum alloy 6063-T52 or a substantial equivalent.
